Democratizing artificial intelligence and machine learning

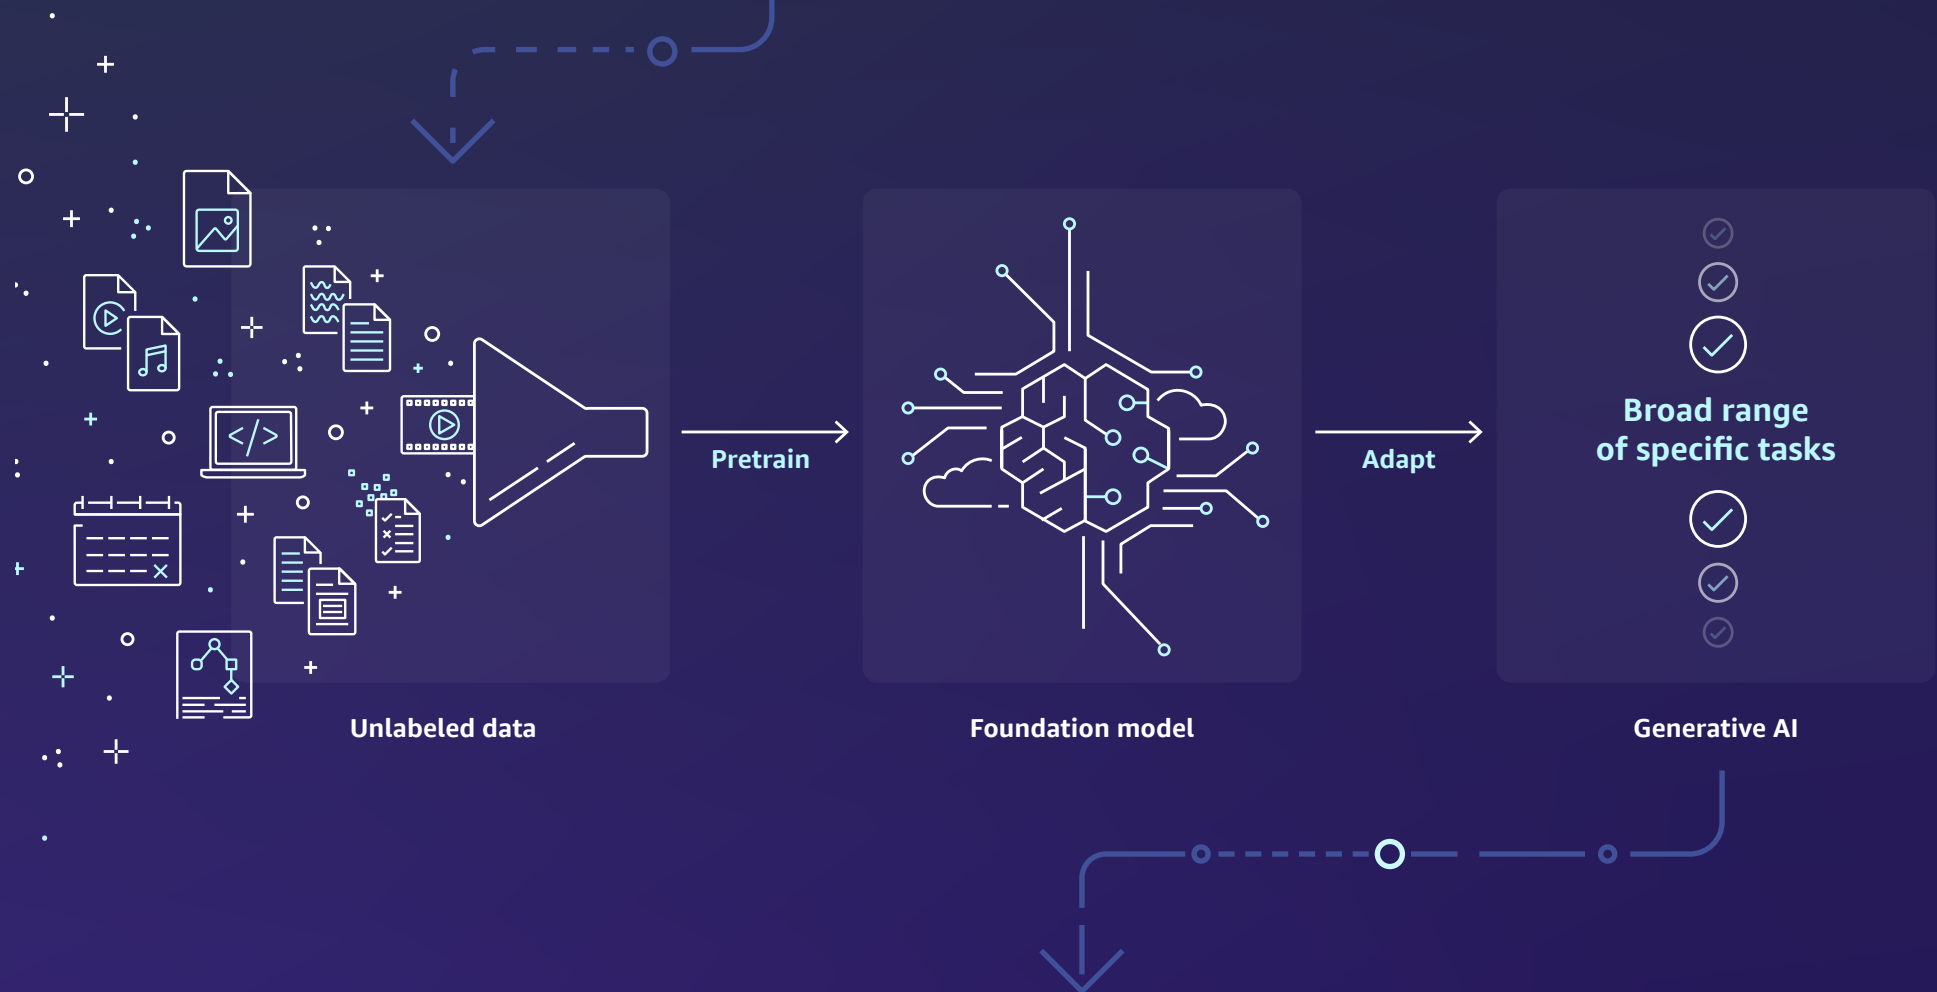

Amazon has a 20+ year history of unlocking the business value of artificial intelligence (AI) to deliver packages faster, personalize experiences, and power billions of Amazon Alexa interactions each week.

Plus, more than 100,000 customers currently use Amazon Web Services (AWS) for AI. No matter where you are in your AI journey, AWS has the experience and expertise to guide you toward reaching your goals.

QUESTION 1

What is generative AI?

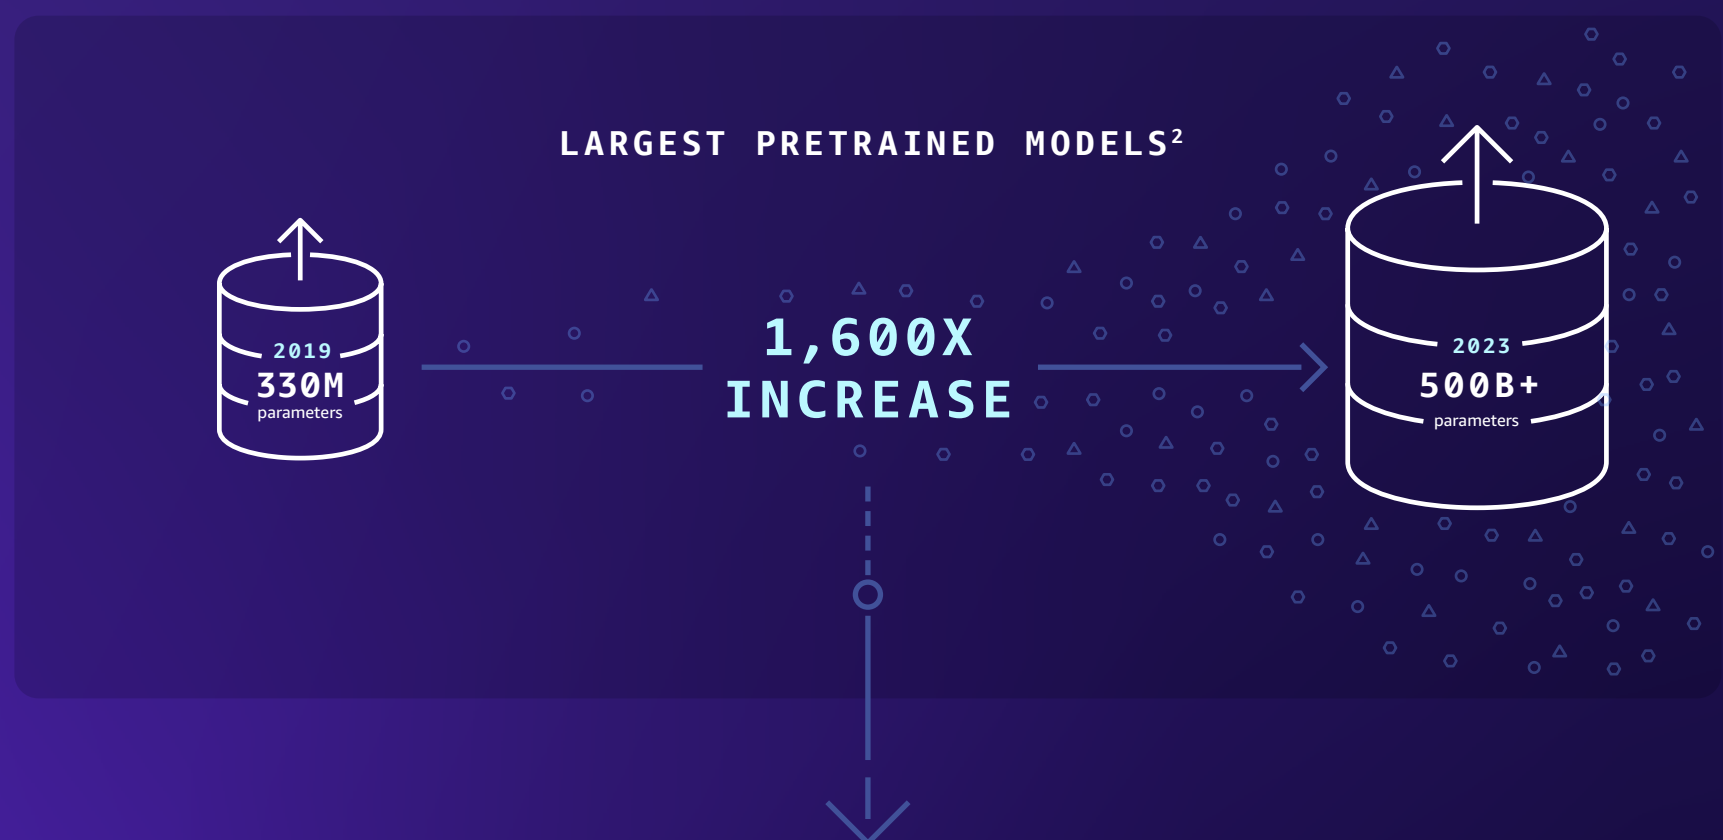

Generative AI is a type of AI that can create new content and ideas, including conversations, stories, images, videos, and music. Generative AI uses foundation models (FMs), which are machine learning (ML) models pretrained on extensive data for adaptability across various tasks.

QUESTION 2

How is it different from previous generations of AI?

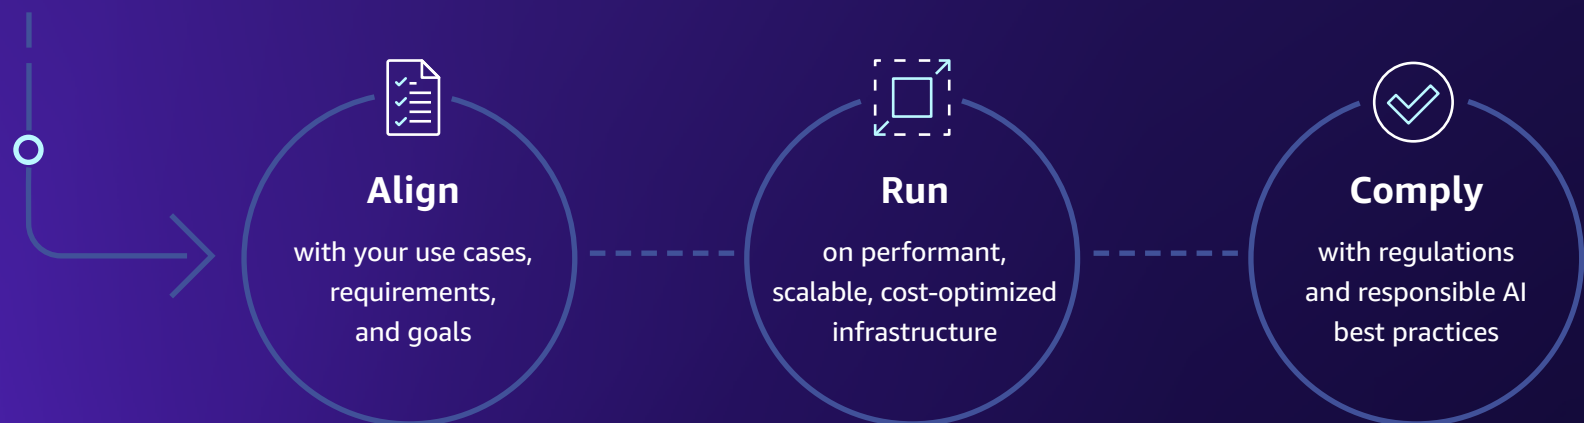

Recent advancements in ML have given rise to models that contain billions of parameters—a massive increase from the most sophisticated models of just a year ago. Generative AI models are pretrained on internet-scale datasets, which allows them to learn and apply their knowledge across a wide range of contexts.

QUESTION 3

What are the business considerations for generative AI?

When evaluating the growing list of generative AI models, look for options that:

QUESTION 4

Where can you use generative AI?

Generative AI can improve outcomes across many industry-specific use cases. Here are just a few examples:

Life sciences

- Accelerate drug discovery
- Design novel protein and synthetic gene sequences
- Create synthetic patient data

Healthcare

- Generate clinical documentation
- Match patients to trials
- Analyze multi-modal data
- Interpret medical images

Financial services

- Improve experiences
- Enhance knowledge workers
- Analyze market sentiment
- Innovate and automate business processes

Media and entertainment

- Accelerate content creation
- Enhance music compositions
- Upscale, interpolate, and restore images and video

Automotive and manufacturing

- Improve part design
- Develop new in-vehicle experiences
- Automate testing and maintenance
- Generate training content

Education

- Summarize texts
- Automate testing and grading
- Personalize and invent new learning experiences

QUESTION 5

How can you add business value with generative AI?
